## Stampin' Pattern - 4 in 1 Quadrilateral Cards using $6 \times 6^{\text {really nopin }}$

## Use this pattern to create 4 simple cards with irregular quadrilaterals!

## Supplies Needed

1-6x 6 sheet of Designer Series Paper or cardstock
4-5 1/2" x $81 / 2^{\prime \prime}$ card bases in a coordinating cardstock color
4-5 $1 / 4$ " x 4" pieces of Basic White
4-2 3/4" x $41 / 4^{\prime \prime}$ pieces of a coordinating cardstock color Coordinating cardstock scraps to create accents/embellishments Embossing Folder of choice

## Stampin' Pattern - 4 in 1 Quadrilateral Cards using $6 \times 6^{\text {malk }}$

## Use this pattern to create 4 simple cards with irregular quadrilaterals!

## Directions for Cutting the DSP or Cardstock

1. Measure $1^{\prime \prime}$ from each corner as shown in the diagram and mark with a pencil. Lightly draw a line between the marks to get the 4 irregular quadrilateral shapes.
2. Line up the marks on the along the cutting line of the paper trimmer and cut first between point A and point B. This will give you two "halves". Then cut on the remaining drawn lines (starting at point C, then point D) to cut the "halves" into two pieces.
3. Taking note of the 4 corners where you measured at 1 ", adhere the irregular quadrilateral shapes to the Basic White 4 " x $51 / 4$ " pieces, putting the corners in the top left of each piece. (Note: if you mark and cut your DSP on the backside you will have to mount the quadrilaterals in the bottom left corner.)
4. Use an embossing folder to dry emboss the $4-23 / 4$ " x $41 / 4$ " pieces of coordinating cardstock. These pieces are going to fill in the space next to the irregular quadrilateral to make a continuous diagonal line across the card front. These pieces are larger than needed to fill the space on the card front so the edges will get cut off once they are adhered to the piece of Basic White.
5. Stamp a sentiment along the diagonal continuous line you just created with the DSP and embossed cardstock.
6. Add an embellishment like ribbon, punch or die to the spot where the DSP and embossed cardstock meet.

- Tip for Success : If the DSP has stripes or a directional pattern, you just need to attach the quadrilaterals in different corners instead of the same one.
