

Inspiration Sheet – Metallic Heat Embossing

Different techniques with metallic embossing powder. (Papercrafting Playdate 134)

Heat Embossing Supplies

- Versamark Ink (102283)
- Heat Tool (129053)
- Metallics WOW! Embossing Powders (165678)
- Embossing Additions Tool Kit (159971)

Other Supplies Used with Embossing Techniques

- Embossing Folders
- Tear and Tape Adhesive (154031)
- Acrylic Blocks
- Metallic Enamel Effects Basics (161610)
- Textured Metallic Specialty paper (163772)

Directions for Basic Heat Embossing

1. Rub the Embossing Buddy (anti-static bag) over the surface of the paper to be embossed on.
2. Ink your image in Versamark ink and stamp onto paper.
3. Pour embossing powder over the image to cover it then let the extra fall off into a collection receptacle like the embossing tray, or a piece of paper.
4. Let the heat tool heat up, then aim at the powdered image, moving slowly back and forth, until the powder melts. Continue to move the heat tool around all areas of the image.

Acrylic Block Technique

To create a metallic distressed shape, ink a clear acrylic block (usually used for attaching images to for stamping) in Versamark ink. Stamp the inked block onto a piece of cardstock. Add powder, tap the excess off, and heat. Use this shape as a backdrop for any kind of focal point.

Gift Card Holder Fold

3" x 12" DSP

- Score at 4" and 8" creating three panels.
- Fold panels toward each other.
- Cut diagonally on the right panel and attach along the bottom to create pocket.

Embossing Folder Technique

To create an entire background of metallic sheen that also has dimension, use an embossing folder. (This works best with embossing folder designs that are simple.) Ink up the top side of the embossing folder with Versamark Ink (this is the side with the Stampin' Up! logo). Lay the cardstock over the inked side and closed the folder. Emboss the cardstock by running the folder through the Cut & Emboss Machine. The background of the embossing folder will be inked, and the raised portions will not. Pour embossing powder over the entire piece of cardstock and heat.

Pop-Up Device

1-1/2" x 4-1/2" scored at 1/2", 1", 1-1/2" from each side. Accordion fold the sides and attach to project.

Card Within a Card Fold

- 5-1/2" x 8-1/2" card base
- 4" x 10-1/2" inside card base

- Score each card base in half.
- Cut a window in the outside card base.
- Attach the inside card base
- Close both card bases and attach the pop out focal point inside the window using pop-up device.

Metallic Collage Elements

Adding metallic embossed images to a stamped collage or background creates a huge WOW and is so easy. Create the collaged background first and let those inks dry completely. Rub the Embossing Buddy over the background. Ink and stamp the images that you want to be metallic in Versamark ink. Add powder, tap the excess off, and heat.
